### ON THE COVER

Congratulations to Rhoda Van Ravenswaay, a North West REC member, for supplying the cover image for this month's issue of *Living with Energy in Iowa* magazine! A night of dense fog in January led to beautiful frosty scenes across Iowa. To have your photo considered for a future cover, email high-res images to editor@ livingwithenergyiniowa.com. If we select your photo, you'll be awarded with \$100. *\** 

## Feel the love: Your electric co-op cares about your safety and education

### **BY ERIN CAMPBELL**

We hope you enjoy flipping through the pages of this magazine every month and find the content

useful in your daily life. Your local electric co-op covers the cost to produce, print and mail this publication to you every month, but have you ever wondered why?

Your electric co-op invests in this publication because it has just one mission – to serve you, the member-

consumer. Fulfilling this mission requires ongoing communication, and one of the most cost-effective ways to reach people is through printed media. We know you're bombarded every day with messages, and it can be exhausting. Messaging on TV, radio and social media can be fleeting and easy to ignore. Your coop sends *Living with Energy in Iowa* to you every month to break through the clutter and to keep you informed.

### Printed materials are effective

Our research tells us that print is an effective way to draw attention to information. According to our 2020 magazine readership survey, almost 9 out of 10 people who receive this magazine take time to flip through the pages each month, and 44% of recipients spend more than 10 minutes reading the magazine. We think that's money well spent to reach as many co-op member-consumers as possible.

In fact, one of the seven core principles that guides all electric co-ops is specifically focused on education, training and information. Electric co-ops invest in high-quality education and training for employees and our elected directors because we know that informed leaders make better decisions. We also invest in educating and informing our member-consumers because what's in *your* best interest is in *our* best interest. As your local electric utility, we have an obligation to help you use energy wisely and safely.

Our publication team works hard to provide high-quality content

each month. Our editor and art director care deeply about the stories they work on, and we are always mindful of using our budget prudently. Crafting this publication is a job we do not take lightly; we aim to earn your trust with every issue.

And in the pages of every issue, you'll find valuable tips on how to save energy and money, how to stay safe around electricity, local news about rural economic development, and emerging trends and technologies in the electric industry. Your local electric co-op is an energy partner you can trust for honest information.

### A mission to keep readers informed

You may also notice what's *not* included in this publication –

advertising. Years ago, Iowa's electric cooperatives made the strategic decision to make *Living with Energy in Iowa* ad-free to maintain the utmost editorial credibility and integrity. Our mission is solely to keep you informed.

And while sending you a highquality magazine every month involves a prudent financial investment, your co-op knows it is far more costly to have an uninformed membership. Communicating frequently is an essential business function that helps your co-op achieve its mission of powering lives and empowering communities.

Thank you for spending time with us every month and for being an educated and informed member of your local electric co-op. As Valentine's Day approaches, we hope you feel the love! *f* 

Erin Campbell is the director of communications for the Iowa Association of Electric Cooperatives.

### EDITOR'S CHOICE CONTEST

### Win a Breville Juice Fountain

Take your goals for healthy eating to the next level with nutritious, wholesome juice! Breville's Juice Fountain uses advanced Cold Spin Technology to quickly extract every bit of fresh, healthy juice without heating ingredients, which preserves maximum nutrients. A two-speed electronic control accommodates custom juicing, including leafy vegetables, soft fruit, denser fruits and harder vegetables. *\$* 

### Visit our website and win!

Enter this month's contest by visiting www.livingwithenergyiniowa.com no later than Feb. 28, 2021. You must be a member of one of Iowa's electric cooperatives to win. There's no obligation associated with entering, we don't share entrant information with anyone and multiple entries from the same account will be disqualified. The winner of the ecobee Smart Thermostat from the December issue was Karl Pinegar, Chariton Valley Electric Cooperative.

### QUOTE OF THE MONTH

A coalition of 29 electric cooperatives has created a regional electric vehicle charging network across Wisconsin, Minnesota, Illinois and Iowa designed to encourage co-op consumer-members to drive EVs.

"Programs like this demonstrate the co-ops' commitment to improving access to environmentally friendly electric technologies for their members, educating the public about electric transportation and showcasing the co-ops' concern for their regions by investing in a local company that is committed to the citizens of their communities."

 Brian Sloboda, director of consumer solutions for the National Rural Electric Cooperative Association

### FOR KIDS ONLY

### SCOTT'S SAFETY SHARE

### If a tree or branch falls on a power line ...

### BY SCOTT MEINECKE

If a tree or branch falls on an electric line, call 9-1-1 and contact your local co-op immediately. Do not touch the branch or the electric line as it could be energized. Never trim trees near power lines; if you see a tree growing

too close to power lines, contact your electric co-op

to report it so our trained staff can prune for you. On Pages 6-7 of this issue, learn more about how your electric cooperative implements a tree trimming program for safety and to reduce power outages. *f* 

Scott Meinecke is the director of safety and loss control for the lowa Association of Electric Cooperatives.

# A Bushel of Stories: New Iowa writing contest for students

Do you have a child or know of a young student who loves to write? A Bushel of Stories is a new agriculture writing contest for Iowa students in grades 3-8. Organized by the Iowa Agriculture Literacy Foundation, students are challenged to write a story book about agriculture or food, a topic that is familiar for many of Iowa's rural electric cooperativeserved families. Student entries will be judged, and the winning submissions will be published.

There are two age divisions, one for students in grades 3-5 and one for students in grades 6-8. Prizes include cash prizes, award plaques and certificates. The winner in each division will have their final work published.

"There is not a wide variety or supply of books that accurately feature agriculture and tell the

story of modern food," says Will Fett, executive director of the Iowa Agriculture Literacy Foundation. "This contest will help students developing their writing skills and also help them learn about agriculture."

The contest opened in January and the deadline for student submissions

is March 1. Student winners will be recognized during National Agriculture Week - March 21-27, 2021. Winners in each division will have their book illustrated and made available to educators. Winners will receive a cash prize of up to \$100. Both the student and their teacher will receive recognition for the winning entry.

The Bushel of Stories student writing competition is funded in part by a Fire-Up Grant from the National Agriculture in the Classroom Organization. The purpose of this grant program is to strengthen state programs by funding innovative ideas and proven outreach strategies to increase agricultural literacy among Pre-K-12 teachers and their students.

### **2021 Empower Rural Iowa recommendations**

The latest recommendations from the Governor's Empower Rural Iowa initiative task forces were recently presented at an Iowa Rural Development Council quarterly meeting. These recommendations came out of the Invest, Grow and

Connect task forces, which fielded input from industry leaders, task force members and the public. Hollee McCormick, executive

GOVERNOR'S EMPOWER RURAL IOWA INITIATIVE

vice president/general manager for Allamakee-Clayton Electric Cooperative, serves on the Empower Rural Iowa executive committee, and Patty Manuel, director of public relations for Maquoketa Valley Electric Cooperative, serves on a task force.

"Empower Rural Iowa provides rural communities with the right tools to enact meaningful change, and this legislative session will be an opportunity to build on the success we have seen over the last two years," says Gov. Reynolds. "By developing these recommendations, we can improve coordination, align processes and support local initiatives designed to grow and develop our rural communities."

Many of the latest recommendations are to continue or increase support for existing Empower Rural Iowa programs, like the Rural Innovation Grant Program, Rural Leadership Exchange and the Empower Rural Iowa Broadband Grant program.

### Other task force recommendations include:

### **Investing in Rural Iowa**

- Improving coordination among rural entrepreneurship service providers and improving outreach and engagement through regional entrepreneurship, town halls or resource fairs.
- Continuing to support ESOP development and improving

promotion and understanding of employee-owned cooperative models.

- Reforming the inheritance tax to limit tax impacts when nonlineal descendants inherit rural small businesses.
- Continuing to support the "Shop Iowa" platform.
- Continuing financial support for the Rural Housing Assessment Grant program and adjusting eligibility requirements to allow for regional or countywide applications.

### **Growing Rural Iowa**

- Identifying and recruiting former Iowans back to Iowa.
- Piloting a "Rural Return Incentive" program through a specially designated Rural Innovation Grant.
- Expanding eligibility for the Beginning Farmer Tax Credit program.
- Increasing connections between Future Ready Iowa and the Governor's Empower Rural Iowa Initiative.
- Continuing support for rural medical residencies and similar programs as well as increasing program awareness through

targeted communication and promotion.

Providing funding support for the Rural Leadership Exchange.

### **Connecting Rural Iowa**

- Increasing funding support for the Empower Rural Iowa Broadband Grant.
- Supporting legislation or other efforts that would provide for broadband project protection along Iowa Department of Transportation (IDOT) right-of-way.

To find out more about the Governor's Empower Rural Iowa Initiative, visit www.iowaeda.com/ empower-rural-iowa/. *\$* 

### TIPS FOR AVOIDING SOLAR SCAMS

As the popularity of rooftop solar panels increases, so do solar scams. Here are a few tips to consider before you install a solar PV system for your home.

- Talk to your electric co-op first. They can offer guidance and recommendations
- Get at least three quotes from solar companies, and thoroughly read their reviews.
- Avoid solar companies that use high-pressure tactics.
- Don't believe
- unrealistic promises.
- Only sign clear, easy-to-understand contracts.

### Branching out: Trees and power outages

### **BY ANN THELEN**

Nearly six months after Iowa's historic derecho, the weather phenomenon that wreaked havoc on parts of the state continues to make headlines. Recalling the power outages and massive destruction from trees and winds, statewide leaders ushered in the new year by remarking on the storm.

"Iowans are well-accustomed to the extremes of Mother Nature's temper, but the derecho in August was unlike anything we've seen. Hurricaneforce winds recorded as high as 140 miles an hour raged across our state," said Gov. Kim Reynolds in her 2021 Condition of the State Address in January. "Over one-third of our counties impacted; 584,000 households left without power; thousands of homes damaged. It was a disaster of unprecedented scope."

Maj. Gen. Ben Corell delivered his condition of the Iowa National Guard address to the Iowa Legislature and detailed how the Guard provided more than 200 soldiers and airmen to communities hit by the hurricaneforce derecho. Their focus was on supporting power restoration in Linn County, and Guard members removed over 1,400 loads of debris totaling more than 15,000 tons from 593 city blocks.

### A top cause of outages

While the storm caused unprecedented damage, it also reinforced the role trees and other vegetation can play in disrupting safe and reliable electric service in all types of weather. It's why Iowa's electric cooperatives rigorously implement strong vegetation management programs.

"Trees are one of the top two causes of outages. In the past two years, they have been the No. 1 cause of outages," says Jeremy Richert, CEO and executive vice president, Maquoketa

Valley Electric Cooperative. "On average, it also takes nearly twice as long to restore power to memberconsumers from tree-related outages."

Richert cites data gathered from analyzing every outage at the co-op, which serves 14,000 members in nine east-central Iowa counties.

"The average time to restore power to member-consumers from an outage that is not tree-related is 1 hour, 12 minutes," he explains. "That's compared to an average of 2 hours and 20 minutes for every outage caused by trees."

Maquoketa Valley Electric Cooperative's vegetation management program includes a systematic, planned program where every area within its service territory is examined annually as part of the co-op's drive-by inspection program. This program identifies where trees and other vegetation are growing too close to power lines and equipment, and those trouble spots are trimmed or sprayed by the co-op's maintenance crews.

In addition, the co-op uses technology to identify system faults that cause blinks but not necessarily outages, such as branches rubbing against power lines. By continually tracking those things in real-time, crews can take care of issues before they become bigger problems.

### Beyond what's just below power lines

"Whether it's a derecho, thunderstorm, ice storm or wind, it's often the trees that are larger and a bit farther out, which cause more problems than the vegetation right below the lines," Richert explains. "They might not look that close, but when they go down in a weather event, they fall onto the line, breaking poles and pulling the lines down."

He adds, "This is why it's so important for us to maximize and clear out the right-of-way as much as the property easement allows so that we can stop trees from falling onto power lines and equipment."

During the derecho, 51% of Maquoketa Valley Electric Cooperative's outages involved trees and accounted for 73% of the total time member-consumers were without power. Richert says the trees would have eventually been a problem with or without a derecho.

### Managing trees in every season

T.I.P. Rural Electric Cooperative, which serves more than 6,300 member-consumers in east-central Iowa, also felt the impact of the derecho. Like electric co-ops across the state, maintaining a strong vegetation management is a necessity in every season.

"Our vegetation management program to inspect our entire system on annual cycles – cutting and spraying where necessary – has improved the number of outages and the duration of outages," explains, Dean Huls, general manager, T.I.P. REC. "For safety and reliability of service, it's imperative we have a strong program."

Although trees are an everyday problem for power lines and equipment, storms draw attention to the problem. "With the derecho, over 80% of our outages and infrastructure damage were from trees," Huls says. "When looking at our system map from the derecho, it's easy to see where the damage was from straight-line winds, and the rest of the damage was from trees. The trees caused most of our outages. Crews spent all day – day-after-day – clearing trees before power could be restored. Many out-of-state lineworkers who were helping with restoration efforts said they have never before in their

**SAFETY MATTERS** 

Downed power lines and equipment can still be energized, and if contact is made, it can result in serious injury or death. In the event of outages with damage, always check with your local electric cooperative before cleanup begins. Tree limbs

that grow near power lines can be unsafe. Never trim trees near power lines; if you see a tree growing too close to power lines

power lines; if you see a tree growing too close to power lines, contact your electric co-op to report it so trained staff can prune for you.

### **PLANTING TIPS**

Before deciding to plant a tree, contact your local electric cooperative. The staff can advise proper placement to ensure the tree will not become a future hazard to electric equipment. Some electric equipment is visible overhead, but some utility services also may be buried in the ground on your property. Iowa law requires that you always call 811 a minimum of two days (excluding Saturday, Sunday and legal holidays) in advance to schedule underground utility lines to be located and marked before initiating any digging or excavating project. If an underground utility line is hit while digging, it can cause serious injuries, disrupt service to entire areas, and potentially result in fines and repair costs. *\** 

career spent so much time clearing trees."

Trees and shrubbery have an important place in our communities. Your local cooperative works hard to make sure trees also have a positive role in the overall safety and reliability of electric systems. Contact your electric cooperative if you have questions about its vegetation management plan.

### **Chocolate Covered Cherries**

- <sup>1</sup>∕₃ cup white corn syrup
- 1/3 cup margarine, softened
- 1 pound powdered sugar
- 3 jars maraschino cherries, drained
- 9 ounces semi-sweet chocolate
- 3<sup>1</sup>/<sub>2</sub> tablespoons paraffin

Mix together corn syrup, margarine and powdered sugar. Wrap mixture around cherries and chill thoroughly. It is important the cherries are drained very well, and the mixture is wrapped around them well. Flatten in your hand and then wrap. Refrigerate on wax paper or non-stick sheets. Melt semi-sweet chocolate with paraffin. Dip the first mixture into the chocolate and paraffin mixture using a fork or other slotted utensil. Keep chocolate over hot water while dipping. Store finished cherries in refrigerator or cool place. If you have extra chocolate, drop in peanuts, mix well, set up on wax paper to cool. *Yield: approximately 80 pieces* 

Sonya Colvin • Ames • Consumers Energy

### **Cherry Cheesecake**

- 12 graham crackers, crushed
- <sup>1</sup>⁄<sub>4</sub> pound margarine or butter
- 8 ounces cream cheese
- 1 cup powdered sugar
- 1 tub whipped topping
- 1 can cherry pie filling

Combine crackers and margarine. Press into a 9x9inch pan or 10-inch pie plate. Mix cream cheese and powdered sugar. Mix in whipped topping and spread mixture over crust. Refrigerate at least 2 hours. Spread cherry pie filling over top. *Servings: 6-9* 

> Leora Van Middendorp • Rock Rapids Lyon Rural Electric Cooperative

### **Strawberry Pear Salad**

- 3 ounces strawberry Jell-O
- 29 ounces canned pears, drained (save juice)
- 8 ounces cream cheese
- 1 cup whipped topping

Dissolve Jell-O into boiling pear juice. Remove from heat. In a blender, combine pears and cream cheese, blend until smooth. Add whipped topping and hot Jell-O. Stir together, then pour into serving bowl. Chill to set, at least 6 hours. *Servings:* 6-8

Kamie Meyer • Lester • Lyon Rural Electric Cooperative

### **Berry Cream Muffins**

- <sup>1</sup>⁄<sub>4</sub> cup butter, softened
- <sup>3</sup>⁄<sub>4</sub> cup plus 2 tablespoons sugar, divided
- 1 egg
- 1/2 teaspoon vanilla extract
- 2<sup>1</sup>⁄<sub>4</sub> cups flour
  - 3 teaspoons baking powder
- 1/2 teaspoon salt
- 1 cup half & half cream or milk
- 1 cup vanilla or white baking chips
- 1 cup fresh raspberries or strawberries
- 2 tablespoons brown sugar

In a large bowl, cream the butter and <sup>3</sup>/<sub>4</sub> cup sugar. Beat in egg and vanilla. Combine flour, baking powder and salt. Add to creamed mixture, alternating with half & half cream. Stir in baking chips and berries. Fill greased or lined muffin cups <sup>3</sup>/<sub>4</sub> full. Combine brown sugar with remaining 2 tablespoons sugar for topping and sprinkle over batter. Bake at 375 degrees F for 25-30 minutes. Cool for 5 minutes before removing from pan. *Yield: 1 dozen*

### **Sweetheart Bars**

- 1 cup butter
- 1½ cup sugar
- 4 eggs
- 1 teaspoon vanilla
- 2<sup>1</sup>/<sub>4</sub> cups flour
- 1½ teaspoon baking powder1 can cherry pie filling
  - powdered sugar icing

Cream butter and sugar; add eggs and vanilla. Beat well. Add dry ingredients, beat well. Reserve 1½ cups batter; pour the rest into a greased 10x15-inch pan. Spread pie filling over top. Drop remaining batter over top. Bake at 350 degrees F for 35 minutes. Frost with thin powdered sugar icing.

### Mary Gropper • Chelsea • T.I.P. Rural Electric Cooperative

### **Cherries in the Snow**

- 6 egg whites
- 1/4 teaspoon salt
- 1/2 teaspoon cream of tartar
- 2<sup>1</sup>/<sub>2</sub> cups sugar, divided
- 2 teaspoon vanilla, divided
- 6 ounces cream cheese
- 8 ounces whipped topping
- 2 cups mini marshmallows
- 21 ounces canned cherry pie filling

Preheat oven to 400 degrees F. Beat egg whites until stiff; add salt and cream of tartar. Gradually add 1½ cups sugar and beat, add 1 teaspoon vanilla. Spread in 9x13-inch buttered pan. Put in pre-heated oven, then turn off oven at once. Leave in oven 8 hours or overnight. Do not open oven during the 8 hours. For the topping, beat together cream cheese, 1 cup sugar and 1 teaspoon vanilla. Fold in whipped topping and marshmallows. Spread mixture on top of meringue. Top cream cheese mixture with pie filling.

### Make the most of recycling Tips to mastering the recycling process

### **BY PAUL WESSLUND**

Can I recycle my mail with the stapled paper and plastic envelope windows? Do I need to break down cardboard boxes before putting them in the recycling bin? Or should I just give up on recycling because it's way too complicated?

Three of every five U.S. households have curbside recycling pickup, according to a study by the Sustainable Packaging Coalition. Another 14% have curbside service available but do not subscribe.

Reasons to recycle are both environmental and financial. Recycling 10 plastic bottles, for example, saves enough energy to power a laptop computer for more than 25 hours, according to the Environmental Protection Agency.

Recycling can also help out with your tax bill. Local governments pay for disposing home and office waste, traditionally by burying it in a landfill. But if some of that waste could be sold for reuse, the income would reduce the cost of the waste management program.

The list of recycling rules is long and complicated, but a way to help master them is to try three different types of thinking:

Think like a sorter: When your curbside bin gets emptied, it's taken to a Materials Recovery Facility where it is dumped onto a conveyor belt where workers pull off items that will gum up the next step in the process, a large screen that jiggles items into a different bin. Think about items that might cause problems with sorting.

Think local: There are about 300 Materials Recovery Facilities around the

country, and many of them have different equipment, meaning every community has its own set of rules for what can be recycled.

Find out who handles recycling in your community, and they will have a list of what can be recycled. And of course, there's an app for that. Two popular apps are Recycle Coach and ReCollect. Just type in your zip code to learn how your local recycling program treats individual items.

You might be thinking, it sounds like I'm doing the work for the recycling program. And you are. You could just dump anything and everything in your recycling bin and let the workers sort it out. They would do that – for a price. You can help keep recycling costs low by following the rules.

Think like an accountant:

### Here are some of the mostwondered-about recycling rules:

Mail: With one exception, all mail can go in the bin. Staples and plastic windows get sorted out by the machinery. The exception is magazines wrapped in plastic – that kind of shrink wrap is better handled by supermarkets, which specialize in recycling bags and other plastic "stretch wrap" around food, paper towels and other products.

**Food containers:** When you're done with the peanut butter jar, no need to rinse it out. It can go right in the bin.

**Cardboard boxes:** The only reason to break them down is to save space in your bin. They'll get well crushed in the truck that picks them up.

**Pizza cartons:** Don't leave crusts or garlic butter containers in them, but recycling equipment can handle a greasy pizza box just fine.

**Plastic bottle caps:** Screw the lid back on, and recycle both the bottle and cap.

**Plastic straws:** Can be recycled, but smaller items tend to fall off the conveyor or through the screen sorters and onto the floor, where they get swept up and hauled off to a normal landfill.

**Labels:** You don't need to remove them.

If you want to take the next step in recycling, think about the big picture – the point is to reduce the waste from your home into the world. First, reduce – if you don't really need to buy something, don't buy it. Second, reuse – bags and wrapping paper, for example, can have more than one life.

Remember, recycling helps our environment but can also reduce the cost of local waste management programs. Check with your local waste management program to learn more about recycling rules in your community. *f* 

Paul Wesslund writes on consumer and cooperative affairs for the National Rural Electric Cooperative Association, the national trade association representing more than 900 local electric cooperatives. From growing suburbs to remote farming communities, electric co-ops serve as engines of economic development for 42 million Americans across 56% of the nation's landscape.

### **Recycling in Iowa**

Iowa's citizens, local governments, business and industry have proactively worked together to protect lowa's environment by reducing waste, recycling, manufacturing recycled goods and buying recycled-content products. This collaborative effort has built an impressive recycling industry that creates and retains higher wage jobs and businesses. To find Iowaspecific recycling information, visit the Iowa Department of Natural Resources' website: www.iowadnr. gov/Environmental-Protection/ Land-Quality/Waste-Planning-Recycling/Recycling. *F* 

### Iowa Rural Power's grassroots advocacy in the new year

### **BY HALEY MOON**

The 2020 elections took place in November, but now that 2021 is here, the election winners have been sworn into their positions at all levels of government. Iowa can expect to see some new faces and some familiar faces representing them in Des Moines and Washington, D.C.

### President Biden's response to issues important to electric cooperatives

At the federal level, the 2020 elections resulted in changes to who is in the White House and who represents Iowa in the halls of Congress. President Joe Biden was sworn in as the 46th U.S. president on Jan. 20. Last year, when presidential candidates were campaigning across the state for the Iowa Caucuses, Iowa Rural Power advocates connected with President Biden to discuss issues that impact electric co-ops and the communities they serve. We were pleased that President Biden took the time to provide written answers to several questions about issues impacting electric co-ops. If you would like to see how he answered these questions, you can visit www.iaruralpower.org/ voter-guide/.

### Iowa's three new members of the U.S. Congress

In addition to a new president, Iowa has three new members of the U.S. Congress and two members who were reelected. Senator Joni Ernst (R) and Congresswoman Cindy Axne (D) were reelected to represent Iowans in the Senate and House, respectively, while Congresswoman Ashley Hinson (R), Congresswoman Mariannette Miller-Meeks (R) and Congressman Randy Feenstra (R) were all elected to the U.S. House

for the first time. In addition to Senator Chuck Grassley, who was not up for reelection in 2020, these five members will represent Iowans in the U.S. House and U.S. Senate in which Democrats are the majority party.

### Iowa Legislature welcomes 27 new members

At the state level, Republicans maintained control of the Iowa House and Iowa Senate, but there are still many new faces at the State Capitol. Between the two chambers, 26 new legislators were sworn in when the 89th General Assembly convened on Jan. 11 in Des Moines. In addition, a special election was held to fill the State Senate seat of Mariannette Miller-Meeks, who was elected to the U.S. House, bringing the total number to 27 new Iowa legislators. If you're not sure who your state legislators are, visit www.legis.iowa.gov/legislators/find and type in your address.

### lowa's electric cooperatives work to ensure the rural voice remains strong and represented

No matter the changes that come from our elections, Iowa's electric cooperatives stand ready to work with all elected officials, regardless of party, to ensure the cooperative point of view is heard in Des Moines and Washington, D.C. It is more important than ever that the voices of rural Iowa remain strong and that lawmakers understand how proposed policies will affect the future of Iowa's communities.

To learn more about the advocacy work, Iowa's electric cooperatives do on behalf of members, and to join them in getting involved, visit www.iaruralpower.org or follow Iowa Rural Power on Facebook and Twitter.

Haley Moon is the advocacy and political action manager for the Iowa Association of Electric Cooperatives.

### **CIPCO** aids in moving a piece of history

### **BY SARAH HEGGEN**

An old barn, like many across the Iowa landscape, recently was moved from the home it had known for a century to a new home roughly three miles away.

The effort required the coordination of several groups – Central Iowa Power Cooperative (CIPCO), Linn County REC and ITC to move wire along the roadways; the Iowa Barn Foundation for help funding the move; heavy haul movers; and the barn's owner, Lucille Goodson of Swisher.

The barn – located along Derby Avenue NW and estimated to be at least 100 years old – was slated to be burned with the demolition of the Bisticky farmstead where it sat, the property having been purchased by Wendling Quarries and planned for development.

"These old barns and houses were built to last and with the craftsmanship of an antique piece of furniture," Goodson says. "You can't replace them. The beams are all mortise and tenon done by hand."

Goodson had taken steps to help save a barn on her own property that was in very poor condition and eventually blew down in a windstorm. When she saw a hand-painted sign advertising the Bisticky barn, she again contacted the Iowa Barn Foundation and began working with board member Dwight Hughes. With his support, she was successful in securing grants from that organization to help offset the cost to move the barn to her property.

"The pieces of the move were many and complicated," she says. "But it was successful. Ron Aylsworth House Movers, moved it and ITC, Linn County REC and CIPCO dropped the power lines. In fact, the utilities worked with such precision and speed that the actual move only took a little over an hour."

"It's not unusual to involve utilities with overhead wire along the route of a major building move," says CIPCO's

Tim Root, area supervisor, Integrated Operations. "It had many moving parts, but we were able to quickly and safely move our lines with minimal disruption to utility customers in the area."

The Bisticky barn will soon find new life as it is restored and used for horses. Clive-based McClure Engineering contributed a percentage of the fee to develop as built drawings to document the renovation. With Iowa Barn Foundation involvement, expect to see this barn open to the public during the organization's annual regional barn tour.

"A neighbor brought over a bottle of wine the day it was moved," Goodson says. "It was labeled, 'Barn Dance Red,' so of course, once COVID is over, we will celebrate with a party!" *\$*

### Which kitchen appliance should you upgrade?

### BY PAT KEEGAN AND BRAD THIESSEN

If your home improvement budget calls for upgrading just one kitchen appliance this year, which appliance replacement will help reduce your energy bills the most?

It may seem like the oldest appliance should go first. That may make sense if you want the looks and features of a newer oven or dishwasher. But with most appliances, the energy savings you get from a new one will take several years to pay for itself with the energy saved.

The appliance replacement most likely to produce the greatest energy savings is your refrigerator. An older fridge can cost about \$20 to run every month. Replacing an old fridge with a new ENERGY STAR®-rated model can cut that down to less than \$5 a month. The ENERGY STAR® label certifies that the appliance saves energy. New refrigerators will include an additional label, the Energy Guide label, which shows how much energy it uses annually and compares that to the most and least efficient models available. It's also possible to measure how much energy your fridge is using with a kWh meter. Energy auditors use these meters to measure energy use for common household appliances. Sometimes the energy use of an older fridge can be reduced by replacing the seal around the door.

### **Style counts**

When you're looking to replace an old fridge, style counts. A top-freezer

setup is the most efficient, while a lower-freezer unit offers medium savings, and a side-by-side style is the least energy efficient.

If your goal is to save money on your energy bill, resist the urge to keep the old fridge in the basement or garage – that won't help you reduce your energy use. An old fridge in an uninsulated garage on a hot summer day can use *a lot* of energy. Maybe you just need more freezer space. If so, we recommend the most efficient freezer you can find. You can find recommendations on www.energystar.gov.

### Second choice

If your current fridge is in good condition, another appliance you may want to consider upgrading is the dishwasher. With most of us spending more time at home these days, chances are you're using your dishwasher more than you used to.

It's smart to consider energy use as you look at replacing appliances because most new appliances use much less energy than they did in the past. Manufacturers have found innovative ways to reduce appliance energy use without sacrificing performance. The federal government began tightening appliance standards in the 1980s and has continued as technological innovations became more cost-effective.

As with any major purchase, be sure to read customer reviews for any brands and models you're considering, and look for additional opportunities to save money, like an upcoming Presidents' Day appliance sale. *f* 

Pat Keegan and Brad Thiessen of Collaborative Efficiency write on energy efficiency topics for the National Rural Electric Cooperative Association.

# Problems with an arthritic hip

### **BY VALERIE VAN KOOTEN**

My mom has always said that getting old ain't for sissies. Now that I'm in my sixth decade of life, I must concur. But it doesn't help when you deliberately make things harder for yourself than is strictly necessary.

Case in point.

I've been hobbling around with an arthritic hip, an issue that has necessitated physical therapy, drugs, shoe inserts, a cane and my newest perfume, mentholated "heating" salve that can, if applied in the wrong places, make you hop across the bedroom in a crazed manner, hip or no hip. But I digress.

### A trip to the doctor

On a recent appointment with the doctor, I needed to remove my jeans to put on a pair of tissue paper shorts that could easily have fit me and at least two other hip sufferers at the same time. I stared at them in disdain. "All the cool kids are wearing them," the nurse said with a laugh. I began thinking unfriendly thoughts of sticking mentholated salve where the sun doesn't shine.

She left the room, and I started to get undressed. I had worn a pair of lace-up shoes that were difficult to get on and tied, what with a hip that wouldn't cooperate in the simplest bending-over movements. It had taken me 10 minutes to get them on that morning, but I had wanted to wear them because they had good traction. If that doesn't make me sound like an old geezer, nothing will. However, the thought of wrestling with them again made me tired immediately.

My jeans were tight around the bottom, which meant I wouldn't be able to take them off without removing the shoes. Or would I? Maybe I could squeeze the legs around the shoes so that they could be left on.

### A new meaning for "hip hop"

In the back of my mind, I knew this was a fraught situation. But if worse came to worst, I would just push the shoes off while they were trapped in my pants. It immediately became apparent that my tight bottoms weren't going to slide over a pair of tennis shoes. I slid the waist down, turning the pants inside out, thinking I might be able to pull the pants off without pulling the shoes off in the meantime, a delusion to which I had become attached.

No go. I had a pair of pants, inside out, hanging off my legs with my shoes still on. I tried using one foot to push the other shoe off and had such a surge of pain, I quickly abandoned that idea. What was left? I stood up, clutching my cane, and bumbled around, trying to dislodge the shoes that were stuck halfway up the leg of my pants. No dice. I was sweating and panicky and utterly out of ideas. I had given "hip hop" a whole new meaning. At that point, there was a knock on the door, and the nurse stuck her head in and took in the situation. "Uh, looks like you need more time," she said.

"No, I don't need more time. I need some help," I snapped. "Could you pull these pant legs off? I thought I could get them off over my shoes," I added lamely.

She smirked – I saw it. I imagined her telling the other nurses over lunch what an idiot I was, hopping around like a lame rabbit in the examining room.

In my head, I re-worked the story to make myself into a sort of fashionable convalescent heroine. Battling painful hip. Cortisone shots. Brandishing an old-lady cane. Hey, it's what all the cool kids are carrying this year.

Valerie Van Kooten is a writer from Pella who loves living in the country and telling its stories. She and her husband Kent have three married sons and two incredibly adorable grandsons.

# LESS GARAGE TIME

Electric cars have fewer moving parts compared to internal combustion engine vehicles. As a result, EVs require less maintenance and have lower maintenance costs.
